

EVERY SOUND MATTERS

In the modern and busy city, we are all custom to the sound of the cars, MTR, traffic lights, constructions...and so on. We are almost drown in those sounds and can't even make our own noise. We want to aware people that we all have right and the creativity to make noises, have voices, and express our emotion. In this park, EVERY NOICE MATTERS. Through the facilities, everyone can compose a unique melody of their own.

Music, a wonderful melody always has the power to transcend a soul into a more authentic form. It's magic travels without borders nor race, affecting people without the fence of time and age. Mentally, music cheers when people lose their words of celebration; it expresses the most personal expressions within a few notes, it ties people together in the most hopeless hours. Physically, playing instruments, singing are exercises that are good for health. It boosts the brain-storming and the body-balancing, making young minds grow and preventing olds from ageing. There are countless types of music that ever exist in this world. In our belief, music does not merely refer to those categories such as classic or pop. Even if a series of sounds can only please one person in the world, then it is music. We value the unique quality of an individual to enjoy the sound; therefore, we also value the right of everyone to make some noise for their own.

Th another focus of the design is to bring people together. We believe that every people have their own preferences on how to play. Nowadays, playground facilities always have the presumption on who they are made for. What we want to do is to break these presumptions, and to enable different people to access and share the facilities together. To play or not to play, to share or not to share, are all their own choices.

TOGETER

MUSIC

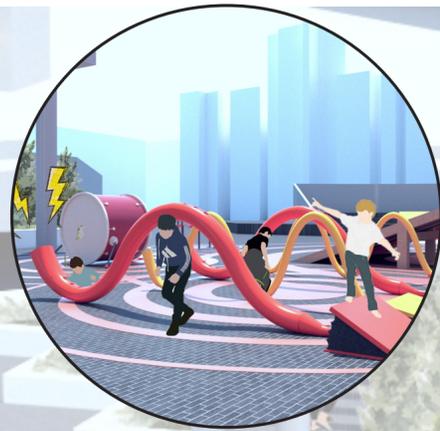

Wind Bell

Phy-Musical Merry-go-round

The concept of the facility originated from the spinning nature shared by traditional music boxes and merry-go-round. By circling the device, the spring will activate the music box and release sound by the yellow speaker in the center.

Sound Wave Pumping Flute

Pumping air in the flute by the pedal in the back can generate sounds. The size of the pedal is designed for multiple people to step on at once to create interaction. The holes which control the pitch are also designed in different heights to encourage co-playing.

Talk tube and Slide puzzle

Talk tube is fun, but very often its setting is permanent in the park, so it cannot really spark new excitement after the first few visits. The combination of slide puzzle and talk tube adds changes to the traditional talk tube. It is not only fun, but is also an intellectual challenge. Moreover, players have to move the slide puzzle in order to construct the route for the talk tube to work, so that the setting is different every time you play.

Pavilion of Pure Sound

The pavilion of pure sound is a space which isolates people from the environment. Simple curtain barrier takes away people's vision so that one can only receive sound.

In this condition, people are forced to explore the world purely by sound, awakening our natural intuition of capturing sound in the wild.

Bass

Cajon drum park bench

Complexity

Metal Pipe Slide

The concept is to make a slide that will generate sound while using. During the slide, the steel pipe will ring.

Snare Drums

Floor Piano

SHOUT BACK

Sound and languages are the most precious gifts for human species. By this echo wall, which also serves as the space definer, people will find their eagor to shout, speak, scream, and so forth. People will reclaim their voice and bravery to avoid drowning in the busy city.
